
Candidate Claim Packet $x = (c, \mathbf{E}, m, v, H_{\text{prev}})$ & Validator Votes $\mathbf{v} = (v_1, \ldots, v_K)$
Stage I (Epistemic Consensus Synthesis): Aggregate votes $\mathbf{v}$ into posterior $q(s \mid x)$ over $\mathcal{S}$
Stage II (Constrained Institutional Risk Router): Gate $\mathcal{E}(x)$ & minimize $\sum_s q(s \mid x)\, C(a, s)$
